ABOUT US

Who We Are

CNE Zone is a Pakistan-based security and IT integration company built by field technicians. We plan, install and support surveillance, access control, networking, cyber security and fire-safety systems for facilities where downtime isn't an option — warehouses, campuses, offices and critical sites across Pakistan.

20+	4+	24/7	6
SITES DEPLOYED	YEARS IN THE FIELD	MONITORING DESK	CORE DISCIPLINES

How We Work

- In-house design, installation and support — no outsourced crews
- Manufacturer-trained technicians, not generalists
- As-built documentation handed over on every project
- A 24/7 support desk focused on answering before a system goes offline

Operating Principles

01
The Mission
Build infrastructure that improves safety and uptime — measured in incidents avoided, not features shipped.

02
The Standard
If a system can't be maintained by the next technician five years from now, we don't consider it finished.

03
The Relationship
We stay on after handover. Most of our new work comes from clients we installed for years ago.

04
Our Promise
We don't simply sell security systems — we build trust through engineering excellence, certified safety and long-term relationships.

Why Clients Choose CNE Zone

Most facilities end up with a different contractor for cameras, another for access control and another for networking — and nobody owning the whole picture. CNE Zone designs it as one system from day one.

- **Single point of accountability** across every subsystem
- **Scalable design** that grows with your facility, not against it
- **Documented, as-built drawings** — not tribal knowledge
- **Responsive support desk** that answers before your system goes offline

WHAT WE DO

Core Services

Six disciplines, one field team. We design around how your building actually operates, then install and support it for as long as you need us.

01
CCTV & Surveillance

IP camera networks built for clear footage in real conditions — low light, wide coverage, long retention.

- IP camera design & placement
- NVR / VMS platforms
- Video analytics & alerts
- Remote monitoring access

02
Access Control & Biometrics

Control who enters, when, and prove it later — without handing out keys you can't track.

- Biometric & card readers
- Door controllers & locks
- Time & attendance tracking
- Centralized user management

03
Networking & Infrastructure

The cabling and switching backbone that everything else depends on.

- Structured cabling
- Fiber optic backbones
- Enterprise switching
- Wi-Fi infrastructure

04
Cyber & IT Security

Because a camera network on an unsecured network is just a security hole with good footage.

- Network segmentation
- System hardening
- Access & traffic monitoring
- Ongoing patch management

05
Fire Alarm & Life Safety

Detection and alarm systems designed to your facility's occupancy and compliance requirements.

- Fire alarm panels
- Smoke & heat detection
- Notification systems
- Integration with access control

06
Engineering & Integration

The layer that ties every system into one dashboard your team can use daily.

- System design & drawings
- Installation & commissioning
- Cross-platform integration
- Preventive maintenance

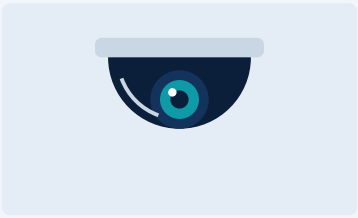
Not sure which system you need? Share your building type and headcount — CNE Zone will recommend a starting scope, free of charge.

EQUIPMENT & SYSTEMS

Products We Deploy

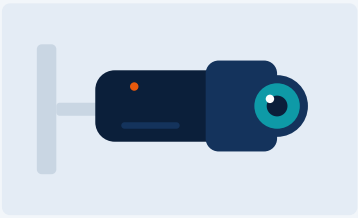
A representative view of the equipment categories CNE Zone designs, installs and supports across each discipline. Illustrations are indicative of the product type and do not depict specific brand models.

CCTV & SURVEILLANCE



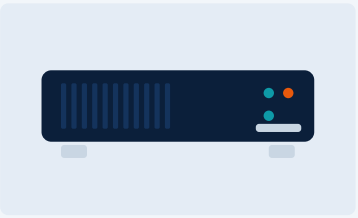
IP Dome Camera

Discreet IP cameras for wide coverage and clear footage in real conditions.



IP Bullet Camera

Long-range IP cameras for perimeters, entrances and outdoor areas.



NVR / VMS Recorder

Network video recording with multi-day retention and remote monitoring access.

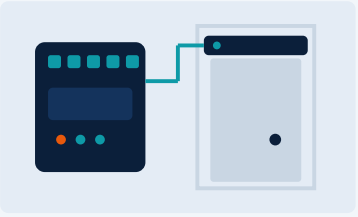
ACCESS CONTROL & BIOMETRICS

Biometric Reader

Fingerprint-based entry and time & attendance tracking.

Card & PIN Reader

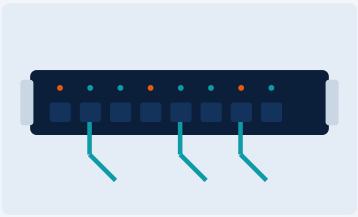
Card and PIN-based entry with centralized user management.



Door Controller & Lock

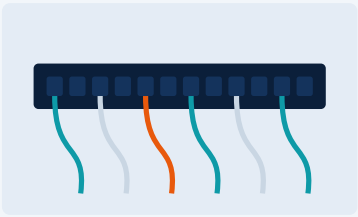
Controllers and locks that decide who enters, when, and keep a record.

NETWORKING & INFRASTRUCTURE



Enterprise Switch

Switching built to carry your security and business traffic reliably.



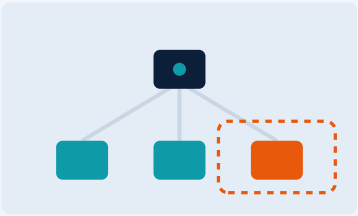
Structured Cabling & Fiber

Patch panels, structured cabling and fiber optic backbones.

Wi-Fi Access Point

Wi-Fi infrastructure planned around your building's coverage needs.

CYBER & IT SECURITY



Network Segmentation

Separating public and restricted zones to limit exposure.

Access & Traffic Monitoring

Visibility into network activity so issues are caught early.

System Hardening

Hardening and ongoing patch management for security systems.

FIRE ALARM & LIFE SAFETY

Fire Alarm Panel

Addressable panels integrated with access control.

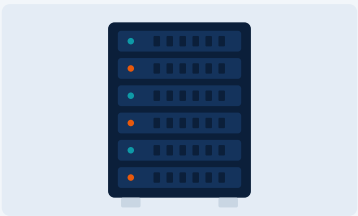
Smoke & Heat Detection

Detection devices placed around your facility's risk profile.

Notification Devices

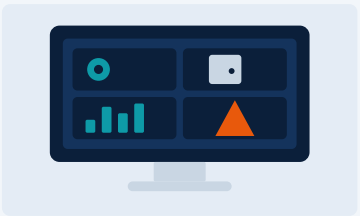
Sounders and strobes for clear alarm notification.

ENGINEERING & INTEGRATION



Server Rack & Room Build

Server rooms with racking, networking and cooling-aware layout.



Unified Dashboard

Cameras, doors, alarms and network health in a single view.

Power Backup

Power backup systems that keep critical infrastructure running.

INTEGRATED SOLUTIONS

One Company. Complete Solutions.

Packaged the way facilities actually get built — as one connected system, not six separate purchase orders that never quite talk to each other.

A
Enterprise Security Suite
CCTV, access control and centralized monitoring designed as one platform for offices and large facilities.

B
Smart Facility Package
Connected sensors, access points and controls that give facility managers one dashboard instead of five logins.

C
Surveillance-as-a-Service
CNE Zone owns the maintenance. You get camera uptime, footage retention and a monthly health report.

D
Access & Attendance Platform
One credential for doors, gates and clock-in — synced to HR, not managed in a spreadsheet.

E
Converged Network Backbone
A single cabling and switching foundation engineered to carry security, Wi-Fi and business traffic without contention.

F
Fire & Life-Safety Compliance
Detection and alarm infrastructure designed to pass inspection the first time — and stay that way.

System Integration

A modern facility runs on more technology than any one manager can watch at once. CNE Zone plans the integration layer that pulls cameras, doors, alarms and network health into a single view — so problems get caught before they become incidents.

- Cross-platform system integration
- Network-ready, expandable architecture
- Centralized monitoring & alerting
- Designed for phased, future expansion

DELIVERY & TRACK RECORD

From Site Visit To Handover

STEP 1
Assess
A site walkthrough to map blind spots, entry points and existing infrastructure before anything gets designed.

STEP 2
Design
Camera plans, cable routes and system diagrams sized to your building — not a generic package.

STEP 3
Deploy
Licensed technicians install and commission every device, then test it under real conditions before sign-off.

STEP 4
Support
A monitoring desk and service agreement that keeps the system healthy long after installation day.

Featured Project Categories

CATEGORY	PROJECT	DESCRIPTION
CCTV	Video Surveillance Deployment	Complete CCTV installation with 4K cameras and NVR system for a corporate office.
Access Control	Multi-Site Access Systems	Biometric and card access system installation for a multi-story facility.
Networking	Network Backbone	Enterprise network setup with fiber optics and structured cabling.
Fire Safety	Fire Alarm System	Intelligent fire detection and alarm system for an industrial facility.
Integration	Integrated Security Solution	Complete security integration combining CCTV, access control and alarm systems.
Engineering	Technology Infrastructure	Server room setup with racks, networking and power backup systems.

Scope Snapshot

- 4K IP camera networks with multi-day NVR retention
- Biometric and card-based access across multi-story buildings
- Fiber backbone and structured cabling for enterprise networks
- Addressable fire alarm panels integrated with access control
- Server room builds with racking, cooling-aware layout and power backup

WHO WE SERVE

Different Walls. Same Standard.

Every industry protects something different — inventory, patients, data, students. The engineering standard behind it stays the same.

01
Corporate Offices
Access control, visitor management and discreet surveillance built for a professional environment.

02
Industrial & Manufacturing
Rugged surveillance and access infrastructure engineered for dust, heat and round-the-clock operations.

03
Retail & Commercial
Loss-prevention-grade camera coverage paired with access and alarm systems sized for storefront budgets.

04
Education Campuses
Controlled entry, campus-wide surveillance and reliable network infrastructure for safer learning environments.

05
Healthcare Facilities
Access-restricted wards, patient-area monitoring and infrastructure built around clinical compliance needs.

06
Government & Critical Facilities
Higher-assurance access control, surveillance and network segmentation for facilities that can't afford exposure.

Compliance-Aware Design

Regulated environments — healthcare, government, education — often have specific requirements around data handling, footage retention periods and physical access logging. CNE Zone factors these into the design stage rather than retrofitting compliance after installation.

- Footage retention policies matched to sector norms
- Access logs structured for audit readiness
- Network segmentation between public and restricted zones

Hardware We Deploy & Support

ZKTeco	**TP-Link**	**Global Fire Equipment**

GET IN TOUCH

Let's Secure Your Site

Tell us about your site and what you're trying to protect. Every inquiry is read by a technician and answered within 24 hours.

PRIMARY CONTACT	**Mian Muhammad Naveed**
LOCATION	Islamabad, Pakistan
PHONE / WHATSAPP	0300 800 5682
EMAIL	cne.zonee@gmail.com
WEBSITE	https://cnezone.github.io
SITE SURVEY	Free; scheduled within 3–5 business days
SUPPORT	24/7 monitoring desk for existing clients

What Happens After You Reach Out

01
We Read It
Every inquiry lands with a technician, so the first reply already understands your site type.

02
We Call Back
Response within 24 hours to confirm scope and schedule a site visit if needed.

03
We Survey
A free walkthrough to map cameras, doors and cable runs.

04
We Quote
A written proposal with equipment, labor and timeline — no hidden line items.

For A Faster, More Accurate Quote

- Approximate building size and number of floors
- What you're trying to secure — entry points, cash areas, server rooms, perimeter
- Whether existing cabling or cameras are already in place
- Your rough timeline — urgent, this quarter, or just exploring options
